Novelty 2024/2025:

**KLUDI-RENON | Modern and filigree design |
Zeitgeist in perfection**

Menden (Germany), November 2024

The modern, delicate design of the Renon mixer series from the Kludi 2024/2025 new product lineup perfectly captures the spirit of current architectural trends. Renon combines soft shapes with geometric precision, inviting touch and exploration. The series' wide range of finishes further expands customization options—whether in warm metallic earth tones or high-contrast matte black, there are no limits to personal style.

Impressive variety

The series presents a perfect blend of luxurious surfaces and rich colors, making it an ideal choice for anyone seeking both beauty and functionality in their bathroom. Kludi Renon fittings are available for all bathroom applications, including washbasins, showers, bathtubs, and bidets. The complete program includes single-lever mixers, three-hole taps, and various tap heights, including versions for countertop washbasins with matching spout lengths. This allows the entire bathroom and even the guest toilet to be equipped with cohesive floor-mounted mixer taps, designed to meet individual preferences and style.

Warm metal tones and matte finishes

Metallic finishes have become a strong trend in architecture and interior design, extending well beyond urban living spaces. Brushed gold, brushed bronze, and brushed black metal (gunmetal) are currently experiencing a renaissance. Renon's extensive color and finish selection is a further asset: seven high-quality finishes are available, ranging from traditional high-gloss chrome to elegant matte black and matte white, as well as warm, trendy shades like brushed gold, brushed bronze, brushed gunmetal, and stainless brushed nickel. Kludi uses the physical vapor deposition (PVD) process to create these brilliant finishes with exceptional durability and luster. This aerospace-developed technique is known for its high-quality, hard-wearing surfaces.

Harmonious accessory combinations

Accessories from Kludi's Vela S series perfectly coordinate with Renon's soft and clear design language, harmoniously complementing the overall bathroom look. Available accessories include towel and bath towel rails, shelves, cosmetic mirrors, soap dispensers, glass holders, hooks, and toilet roll holders. All accessories are made of high-quality metal and come in all seven finishes.

KLUDI - The Shape of Water. Kludi GmbH & Co. KG - founded in 1926 in the Sauerland region of Germany - stands for almost 100 years of experience in the development and manufacture of high-quality fittings for bathrooms and kitchens. This tradition as a fittings specialist has given rise to the claim that Kludi products uniquely combine excellent 'German quality', maximum functionality, innovative technologies and first-class design. Time and again, Kludi has provided important impetus for developments in the bathroom and kitchen with pioneering solutions.

The medium-sized company based in Menden holds around 170 inventions and over 100 patents, as well as numerous prestigious design and innovation awards. Among other honors, Kludi was recognized as one of the "TOP 100 Innovators" in the German SME sector in 2022. This year, the company was also awarded the Plus-X Award for "Highest Customer Satisfaction 2024" in the B2C business sector. The Kludi family includes around 700 employees in sales and production facilities across Europe and Asia. In addition to its fully integrated main plant in Menden, Kludi manufactures fittings in Diósd, Hungary,

and Ras Al Khaimah, United Arab Emirates, from where products are exported to over 100 countries. Kludi has been part of the RAK Ceramics Group since 2022.
